Version 9.9.1 (11/20/26) Update

Entré Security & Access Management software has been updated to Version 9.9.1 (11/20/26).

New Features

LDAP Connection

A **Test Connection** button has been added to the **LDAP Configuration** window to test the LDAP connection. You can view the **LDAP Connection** status in the **Health Monitor Module**. The status displays **Connected** if the bind is successful and **Failed** if the bind could not connect to the LDAP server.

HTTP Support in Cell Activation Forward Proxy

The **Cell Activation Forward Proxy** now accepts, route, and proxy unencrypted HTTP requests alongside existing HTTPS traffic.

Improvements

CSV Import

This update improves large CSV imports for XR650 user codes to help prevent stalled processes.

Health Check Endpoint

Entré has added a **Health Check Endpoint** to check if the Web Client application is running via html.

Restart Orchestrator Update

The **Restart Orchestrator** now stops the service when an SQL outage occurs to help prevent manual service and driver intervention.

Key Fob Account Numbers

Account numbers assigned to deleted key fobs are now sent to SCS-VR, so only deleted key fobs with the associated account numbers are removed.

User Codes, Profiles, and Groups

This update improves sending or clearing **User Codes**, **Profiles** on XR150/XR550 panels, and **Groups** on XR650 panels to ensure **Profiles** and **Groups** are not overwritten if they contain duplicate numbers.

Fixes

Operator Profile Permissions

Entré now checks operators' profile permissions before allowing them to enable or disable a panel. Previously, operators could perform these actions, even when their profiles did not grant them permission.

Obtaining the New Software

Entré Security & Access Management software Version 9.9.1 is provided to dealers who have previously purchased an Entré license, are current with their Entré support agreement, and have an Entré Certified Technician.

Before Installing or Upgrading

Before installing or upgrading to Entré Version 9.9.1, ensure the following prerequisites are met:

- **Entré Version** — Uninstall all versions of Entré Version 9.8.4 or older before installing the newest version, and verify that your SQL Server connection string includes the encryption parameter. Refer to the Entré Installation and Setup Guide (LT-3129) or the Entré Upgrade Training for instructions on installing or uninstalling Entré.
- **Java Version** — Entré requires Java JDK 17.0.15 or higher.
- **SQL Server Version** — Microsoft SQL Server 2017 and earlier are no longer supported. Upgrade to Microsoft SQL 2019 or higher and set the Hibernate dialect to SQL Server 2012: hibernate.dialect=org.hibernate.dialect.SQLServer2012Dialect.
- **SQL Database Backup** — Perform a backup of your SQL database using Microsoft SQL Server Management Studio. DMP recommends that you reindex and reorganize the SQL database after upgrading Entré. It is recommended to make this part of your standard database maintenance as described in the Server Maintenance section of the Entré Server Maintenance Guide (LT-3131).

To upgrade to Entré Version 9.9.1, please contact the Software Support Team in DMP Technical Support at 888.436.7832.
