

# System Link™ Demo

## Description

The System Link Demo has been created to exhibit the capabilities of System Link. A database has been created with panel information and programming to allow you to become familiar with the program. The database contains several XR200 and XR200-485 panels and an XR20 panel. These panels show you the wide range of functions you can perform using System Link. The System Link Demo allows you to view the panel information and programming, but the System Link Demo does not save any changes you make to the panels.

System Link, from DMP, is an end-user alarm panel management software solution that allows you to easily maintain important panel operations from your personal computer.

Through System Link, you are able to setup new alarm system users and System Link operators, configure new panel accounts, monitor system status, silence alarms, and more.

## Operation

At program start-up, System Link™ automatically displays the Operator Log On window. Enter **new** in the Password field to use the System Link Demo. After you enter **new** and press **OK**, the main screen appears containing the menu bar from which you can access the various options. At any time during your System Link session, you may use the Help file to learn more about the program. Select Help in the Menu Bar or press F1 for context-sensitive help specific to the open dialog box.

After logging on to System Link, select a panel from the Panel Information window. A pop-up window asks you to connect: Click **No**: When using the System Link Demo, you may view panels without being connected to them. If you click **Yes**, System Link Demo informs you that you cannot connect.

Use the menu bar to select the options you need to view the panel. After you finish viewing a panel, go to **Panel > Close Panel**. To view a different panel, click **File > Panel Information** and select the panel you wish to view.

## System Link™ Menu Bar

**File**—This menu allows you to open, close, modify, and create new account files. You may also print account information, panel programming, and panel event reports.

**Panel Information:** select the panel you wish to open, modify the account information, create new accounts, and copy and delete account files.

**Close Panel:** close the panel that is open.

**Print:** display on screen or print to a local printer account failure information, panel programming, panel event buffer, and activity log reports. Print or preview these reports for a full understanding of all that System Link can do.

**Exit:** quits the System Link™ program.

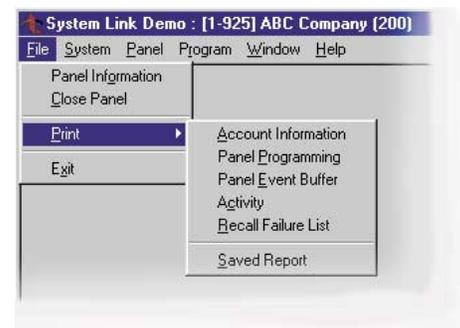

**System**—This menu allows you to log on or off System Link, configure your System Link software, and set up your communication link with your alarm panels. You may also authorize operators, and access diagnostic information.

**Log On/Off:** enter **new** to use the System Link Demo.

**Configure > System Link Demo:** change the setup of the receiver and the program.

**Operator Configuration:** configure System Link operators. You can assign different operators different levels of authority, add operators, and delete operators.

**Diagnostics:** view the strings of data the panel sends and receives from your computer.

**Panel**—This allows you to connect and disconnect with your panel and retrieve data from the panel. You can also monitor system status and request panel events. You cannot connect to a panel using the System Link Demo. These options are not activated in the Demo version.

**Connect:** connect System Link™ to a panel. You must be connected to the panel to make any changes.

**Disconnect:** disconnect System Link™ from a panel and automatically hang up the telephone line.

**Retrieve:** upload panel Schedules, User Codes and Holiday Dates which overwrite and update the account database file.

**Request Events:** uploads a copy of the panel event history.

**Hangup:** manually hangs up the telephone line.

**Program**—The Program menu allows you to program Holiday Dates, Schedules, Profiles, and User Codes on DMP alarm panels that offer that function.

**Holiday Dates:** enter dates that are used by the Holiday Schedules to override daily schedules.

**Schedules:** enter or update opening, closing, and output (relay) schedules.

**Profiles:** define the authority of each user code in the system.

**User Codes:** enter or make changes to user codes.

**Help**—System Link contains a comprehensive Help file you can access from either the main menu or by pressing the F1 key while any program dialog box is open.

**Help:** display the Help file you can search to find answers to your questions about System Link™.

**About:** view the System Link™ program version number and copyright information.

## Panel Compatibility

System Link is compatible with all DMP Command Processor™ Panels. Refer to the chart for a complete list of those panels.

System Link™ and Panel Compatibility	
DMP Panel	Version
XR5	All
XRSuper6	All
XR10	All
XR20	All
XR40	All
XR200	All
XR200-485	All
XR200-485B	All
XR500/XR500N	All
XR2400F	All
XR6	All
1512	All
1812/1712	Requires version 301 or higher and a 984 Communicator with an RJ jack.
1912	All
1912XR	All
1612	All
