

1142 Two-Button Wireless Panic Transmitters

Introducing a new heavy-duty model for 1142 Two-Button Wireless Panic Transmitters. The 1142 is often installed under a desk or counter in a high-traffic area, making it vulnerable to frequent bumps that result in damage to its exterior. In these situations, the 1142HD is a perfect solution. A more durable housing secured by screws makes this model less prone to accidental separation from its base and subsequent trouble signals, yet battery replacement is fast and easy. The added protection of the heavy-duty exterior also reduces truck rolls needed to replace cracked housing on lighter duty units.

The 1142 is typically used as a panic alarm, but this transmitter can be used for a multitude of applications. It can also be programmed to control outputs such as a garage door, light switch, door release or as an arming or disarming button.

1142HD

Product	Application
1142	For standard use that is not high traffic
1142HD	For installations under a desk that would be frequently bumped or jarred
1142-GUARD	A heavy-duty option to retrofit standard 1142s in the field
1142BC	Includes optional belt clip to offer mobile protection
