

# SINGLE SIGN-ON SET UP

Single sign-on (SSO) provides a convenient and secure way for companies to authenticate users into DMP cloud software.

SSO allows customers and users to log in to multiple web-based portals with one set of credentials. To set up SSO in your IdP for your customers to use with Dealer Admin and Virtual Keypad, complete the steps below:

1. Navigate to [ory.com/docs/polis/sso-providers](https://ory.com/docs/polis/sso-providers).
2. At **SAML SSO Providers**, select your SSO provider in the list.
3. Follow the instructions to create your custom SAML SSO application with your IdP.

**Note:** Replace any references of your hosted URL with **[polis.securecomwireless.com](https://polis.securecomwireless.com)**.

4. Once you have set up the SSO in your IdP, contact DMP and send them the **Federation Metadata** for your SSO application in one of the following formats:
  - Metadata URL
  - Full Metadata XML, likely provided by your IdP as a raw XML file download.
5. Once the SSO in your IdP is configured with DMP, enter the following callback URL in your SAML SSO application to redirect customers to Dealer Admin and Virtual Keypad: [polis.securecomwireless.com/api/oauth/saml](https://polis.securecomwireless.com/api/oauth/saml).
