Millions of cameras are about to get smarter.

Without replacing a thing.

- Install on your existing cameras to provide additional functionality

- Reduce false alarms

- Integrate video with intrusion and access control

- Designed for scalability

- Receive real-time notifications that matter

- View live video and recorded clips in Virtual Keypad

DON'T REPLACE YOUR CAMERAS — MAKE THEM SMARTER
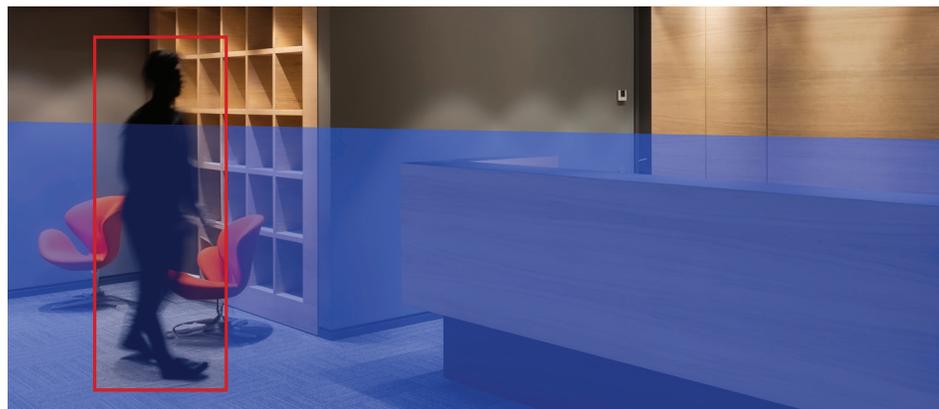

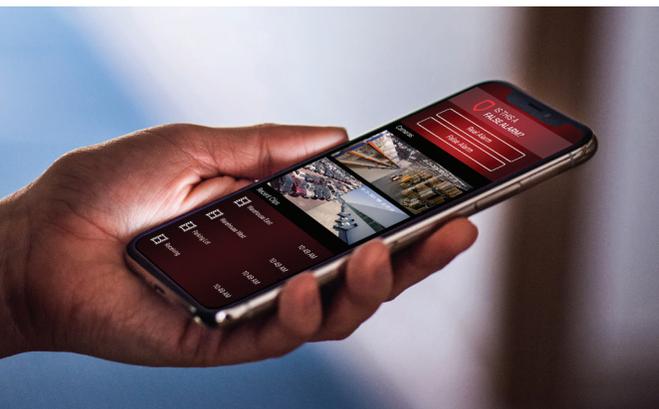

AlarmVision DRIVER

With the **AlarmVision® Driver**, existing Axis cameras can detect threats, trigger alarms and talk directly to DMP control panels — no new hardware, no rewiring, no downtime. You already have the cameras. Now give them superpowers.

AlarmVision connects cameras, analytics and DMP alarm panels to create intelligent motion detectors that identify actual threats in real time. This technology virtually eliminates false alarms and costly fines.

VIRTUAL KEYPAD DRIVER

The **Virtual Keypad™ Driver** gives you a fully unified security experience — putting Axis video into **one app** with intrusion and access control. Eliminate the stress of juggling multiple platforms and take advantage of the simplicity you've been asking for. One app. Zero headaches.

These drivers can function separately or be used together for a premium experience!
