

VAULT™

Protect Your Network from the Inside Out

Designed for banks, financial institutions, and government environments where data protection is non-negotiable, VAULT creates a private, end-to-end encrypted tunnel between your corporate network and the SecureCom™ infrastructure. Your security panels never touch the public internet, keeping your most sensitive systems fully protected from external threats.

With IPsec encryption, every communication is locked down and authenticated, ensuring your systems stay private, responsive and under your control. Administrators can also remotely terminate connections instantly — providing an added safeguard if access ever needs to be cut off.

NO PUBLIC EXPOSURE

Your systems never touch the internet

RELIABLE PERFORMANCE

Consistent, dependable connections across all sites

CENTRALIZED CONTROL

Immediate access via Virtual Keypad

REMOTE TERMINATION

Shut down access instantly if needed

TRUSTED ENCRYPTION

Enterprise-grade, government & bank-ready

EVERY CONNECTION IS A DOORWAY. VAULT LOCKS THEM ALL.
