

# X1 Series

Flexible. Scalable. Yours.

With X1, you don't have to choose between a "1-door" or "8-door" box. Instead, think of it like a menu: start with the base, then add the ingredients that fit your site. Doors, floors, outputs — it all comes together exactly the way you want.

## BUILD YOUR OWN!

### STEP 1 GET YOUR BASE (CONTROLLER)

- **X1PCB:** For any door-only configuration
- **X1PCB + X1-ELEV-PCB:** For elevator control

### STEP 2 PICK YOUR POWER

- **Standard Power Supply:** Reliable for most setups
- **PoE (Power over Ethernet):** Clean and simple, no extra cabling

### STEP 3 ADD YOUR EXPANSIONS

- **Need more doors?** Add one XD module for each additional door desired (up to 7 per X1)
- **Need more floors?** Add one X1-ELEV-PCB module for up to 10 floors of additional control per board
- **Need more outputs?** Add one X1-OUT-PCB for up to 10 more customizable triggers — lights, sirens, automations, etc.

### STEP 4 STAY CONNECTED

Note: Each X1 comes with built-in Wi-Fi and network communication. For additional coverage, choose your cell-backup.

- **263LTE-A-X1:** AT&T LTE
- **263LTE-V-X1:** Verizon LTE

### STEP 5 SELECT YOUR ENCLOSURE

Be sure to account for your power supply and expansion modules when choosing your enclosure.

- **Single:** For 1-door installs
- **X1-3-ENC:** For up to 3 modules
- **X1-4-ENC:** For up to 4 modules
- **X1-8-ENC:** For up to 8 modules
- **X1-PLATE-16:** For up to 16 modules (requires X1-8-ENC as base)

# OR, LET US TAKE CARE OF THE BUILD!

For your convenience, DMP offers three pre-built X1 system configurations:

## X1 (SINGLE-DOOR KIT)

A simple, ready-to-go solution for one door. Prewired, pre-mounted and powered — everything you need in one compact enclosure. Each door supports **two readers (Wiegand or OSDP), a door position switch, request-to-exit, plus one customizable input**. Perfect for smaller spaces, remote locations like FEMA shelters and parks and rec buildings, or just as a starting point for your access control system.

## X1-8 (EIGHT-DOOR KIT)

All-in-one control for up to 8 doors. Prewired, mounted and equipped with built-in power, so you're ready to expand without extra hassle. Each door supports **dual readers and flexible inputs**, making it easy to scale security across a larger site.

## X1-ELEV (ELEVATOR KIT)

Elevator access made easy. Control up to 10 floors in one clean package — prewired, mounted and powered. Includes the same **reader and input flexibility** as single doors, plus elevator floor relays for smooth scaling in multi-level buildings.
