

## Version 2.61 Update

Remote Link has been updated to Version 2.61 (2/12/26) to support XR Series Control Panels with the following firmware versions:

- Version 252
- Version 253
- Version 254
- Version 255

Remote Link now supports the following additional features for XR Series panels:

- [Zone Location](#): You can assign zones an optional secondary name to further clarify the zone's location, which helps monitoring center operators and first responders identify and respond to events more quickly.
- [Remote OSDP Support](#): This update allows XR Series panels to receive and send OSDP commands to [7873 Series Touchscreen Keypads with firmware Version 209 \(8/22/25\)](#) and [734 Access Control Modules firmware Version 108 \(6/15/25\)](#).
- [Holdup Zone Type](#): You can program a **Holdup** zone type in Zone Information. Holdup zones operate as silent panics and do not trigger bell actions, or audible or visual alerts on the keypad.
- [Panel Serial Number in Serial 3 Messages](#): You can choose to append the panel serial number to Serial 3 messages.
- [Host Name Configuration](#): You can enter a host name instead of an IP address, which removes the need to update the panel if the IP address changes.

## More Information

For more information about Remote Link, refer to [Remote Link Help: Program the Panel](#).

## Obtaining the New Firmware

The newest update to Remote Link is available for download, free of charge, on Dealer Admin ([dealer.securecomwireless.com](http://dealer.securecomwireless.com)).
