VUE Video Doorbell
Version 142

TECHNICAL UPDATE | NOVEMBER 2026

Version 142 Update

Updated Version 142 (t5.1.1632.2412.458.0.1.1.**142**_20261022) firmware is now available for the VUE Video Doorbell.

Mechanical Chime

Previously, enabling a mechanical chime for the doorbell in Dealer Admin, the **Chime Setup** setting remained on **No Chime** instead of updating to **Mechanical**. Now, the setting correctly updates to **Mechanical** when selected.

Consecutive Clips

Previously, for **Person** detection events, 5-second gaps of unrecorded video occurred between consecutive video clips. Now, consecutive clips overlap by a couple of seconds to provide more context when a person remains in a detection region for an extended period.

Update the Doorbell Firmware

Doorbells activated for the first time automatically install the latest firmware during onboarding.

If your camera is already activated, complete the following steps to manually update the firmware:

1. Log in to Dealer Admin (dealer.securecomwireless.com).
2. Go to **Customers** and select the **System Name** the camera is associated with.
3. At **Video**, go to **Video Doorbell** and select the doorbell that you want to update.
4. At the top of the doorbell settings page, a banner displays notifying you that a firmware update is available. Select **Update Device** to update the firmware.
